

Yubraj Adhikari

Software Developer

GitHub | LinkedIn | email@adhikariyubraj.com.np | adhikariyubraj.com.np

Summary

Full Stack Developer with 3+ years of professional experience building production web applications, reusable UI components, and design systems using React, Next.js, and TypeScript. Experienced in frontend architecture, component development, Figma-to-production implementation, REST APIs, WebSockets, backend development, cloud deployment, and CI/CD workflows. Strong focus on reusable architecture, maintainable code, responsive interfaces, and developer experience.

Experience

Full Stack Developer (Mid-Level) – Remote

Feb 2026 – Present

RadianOS

- Develop and maintain Radian UI, a production-ready React component library and design system used across products including KrispCall, Tivazo, airchannel.ai, and Dialaxy.
- Build reusable UI blocks, components, and developer tools such as Avatar and other application-ready building blocks using React, TypeScript, and Tailwind CSS.
- Work on the design-to-development workflow, including Figma integration and tools that help developers implement designs directly in React.
- Deploy and maintain applications and services on Hetzner using Coolify, managing development, main, and additional feature environments.
- Research and implement AI-agent and MCP-based workflows to improve developer interaction with Radian UI and its design system.
- Collaborate with designers and developers to translate Figma designs into reusable, responsive, and production-ready interfaces.
- Contribute to component architecture, design-system consistency, and reusable development patterns across the platform.

Junior Full Stack Developer – Remote

Feb 2025 – Jan 2026

RadianOS

- Developed reusable Radian UI components including Charts, Input, Table, Checkbox, Switch, Resizable, Accordion, Carousel, and Tooltip.
- Built and maintained component documentation with usage examples and implementation guidance for developers.
- Contributed to the Radian UI CLI, including theme configuration workflows that allow developers to initialize projects with their preferred themes and brand colors.
- Evaluated UI libraries and component patterns and researched competing products such as shaden/ui to improve the Radian UI developer experience.
- Collaborated with 4 developers and 2 designers to build, document, and refine reusable components and design-system features.

Full Stack Developer Intern – Remote

Nov 2024 – Jan 2025

RadianOS

- Built a full-stack blog application using Next.js, Express.js, and PostgreSQL, implementing core CRUD functionality and database-backed content management.
- Implemented blog features including rich-text formatting, content creation, and editing workflows.
- Containerized the frontend and backend using Docker and created YAML-based configuration to connect application services with the PostgreSQL database.
- Worked with Neon-hosted PostgreSQL for cloud database development and application data management.
- Gained hands-on experience with PostHog, Husky, Docker, Figma, and full-stack development workflows.

Junior Frontend Developer – Remote CodeSQUAD

Mar 2024 – Nov 2024

- Developed the frontend of a learning platform connecting students with tutors using React and Next.js.
- Managed application-wide UI and state-management workflows using Zustand and Redux.
- Implemented real-time WebSocket communication between students and tutors, including one-to-one and group messaging workflows.
- Built responsive interfaces and user experiences from Figma designs, including subject and tutor discovery with multiple filtering options.
- Integrated frontend functionality with backend services and contributed to overall application state and user-experience development.

Junior Cloud Solution Architect – Remote Iron Rim

Jan 2024 – Mar 2024

- Gained hands-on experience with AWS services including EC2 and S3, and worked with Azure cloud environments and deployment workflows.
- Worked with Jenkins to connect GitHub repositories with AWS environments and automate application build and deployment workflows.
- Troubleshoot deployment issues, fixed bugs, and updated CI/CD pipeline configurations in AWS and Azure environments.
- Worked with Snowflake for user-data management and assisted with data migration to updated versions while preserving existing data.
- Maintained and updated legacy application code while working within existing cloud and application architecture.

Skills

- **Languages:** TypeScript, JavaScript (ES6+), Python, HTML5, CSS3
- **Frontend:** React, Next.js, Tailwind CSS, Redux, Zustand, React Router, Material-UI, Vite
- **UI Architecture & Design Systems:** Radix UI, class-variance-authority (CVA), design tokens, OKLCH theming, component API design, reusable component architecture, responsive and accessible UI
- **Backend:** Node.js, Express.js, FastAPI, REST APIs, authentication and authorization, WebSockets
- **Databases:** PostgreSQL, MongoDB, MySQL, Neon
- **DevOps & Cloud:** AWS, Azure, Hetzner, Coolify, Docker, Jenkins, CI/CD pipelines, GitHub, Git, pnpm, Turborepo
- **Machine Learning:** XGBoost, PyDriller, feature engineering, class-imbalance handling, probability calibration, Git-history analytics
- **Engineering Practices:** DRY, SOLID, component-driven development, scalable architecture, maintainable code, Agile collaboration

Projects

RadianOS – UI Component Library

- Contributed to a reusable UI component library and design system focused on consistent and scalable product development.
- Developed reusable React and TypeScript components using Tailwind CSS and component-driven architecture.
- Contributed to component documentation, CLI tooling, theme configuration, and Figma-to-React development workflows.

Bug Prediction System – Machine Learning

- Developed an end-to-end commit defect-risk prediction system combining software engineering metrics, machine learning, and interactive visualization.
- Built an XGBoost pipeline incorporating feature engineering, class-imbalance handling, and probability calibration.

- Integrated Git-history analysis using PyDriller and PostgreSQL for storing prediction data and analysis results.
- Developed a React dashboard for visualizing commit-level defect risk and prediction results.
- **Link:** bug-prediction-system.vercel.app

My Academy Help – Next.js

- Developed a learning platform that enables students to find tutors for specific subjects using Next.js.
- Implemented application state management using Redux and integrated frontend functionality with backend services.
- **Link:** myacademyhelp.com

News Portal – Next.js

- Developed a responsive news portal aggregating news from multiple Nepali news sources.
- Implemented authentication and authorization using Firebase Authentication.
- Integrated Redux for state management and Axios for communication with backend APIs.

Personal Portfolio Website – React.js

- Built a responsive portfolio website using React and Tailwind CSS to showcase projects, skills, and professional experience.
- Implemented responsive layouts, accessible UI, animations, and page transitions.
- **Link:** www.adhikariyubraj.com.np

Google Drive Clone – MERN Stack

- Developed a web application for storing and managing photos using the MERN stack.
- Built the application using React.js, Express.js, MongoDB, and Node.js.
- **Link:** google-drive-clones.netlify.app

Education

Bachelor of Computer Application

2021 – 2026

Tribhuvan University, Nepal
